Education

Information Technology

Metropolia University Of Applied Science
2023-2027

12th Grade (computer Science)

BGS National Public School
2021-2023

10th Grade

Head Start Educational Academy
2020-2021

Skills

Python 

SQL 

HTML 

CSS 

Communication 

Flask 

React.js 

Achievements

University

Metropolia University of Applied Sciences

After getting into one of the biggest universities of applied sciences in Finland. I applied and got into being an ambassador and a student tutor, I am also an active member in ESN which is an organization in Europe for exchange students. I also have a **GPA of 4.5/5** in my studies

Python Project

Translator

This was a simple project I did that helped me translate English to Finnish while also learning the **Flask** framework and how to implement **pipelines** in it. This was my first project on Flask that helped me get a hands on knowledge on the web framework. This was my first university project which I created in my first semester(Sept 23')

Review System

This project was something my Lecturer at Metropolia University Of Applied Sciences had given me so that he could **implement it in his classes**. The project uses Flask and MySQL database to get feedback and display it in the form of a graph to the admin. This project took me 3 moths and I worked on it from November 23' to February 24'

Flight Simulator

Developed an flight simulator game which can be played on the web-browser the main aim of this was to improve my understanding in Flask and front end technologies such as HTML, CSS and JS. All the code can be found on my GitHub page.

Previous Internship

Lahjakamu

At this start up company in Helsinki I helped them create their frontend for their websites, using different tools such as react.js, python and backend databases such as mysql and mariadb

G2G Technologies

I was trained and worked as a web developer in this start up company which was trying to redefine themselves. I learnt HTML and CSS here and ended up helping them make their main website that is no online(<https://www.g2gtechnologies.com/>). I did this in all under 80 days which shows how fast I can learn and master an art.
